

Below is a reminder of interpretation of the final fault geometries hangingwall derived deltas where sediment is coloured relative to 5 fill intervals shown in **Figure 4** of document **FW.deltas.introduction.pdf**. The sediment source in these experiments is in the hangingwall of the right-hand basement fault (2). Nomenclature indicates the initial location of the delta front in units (eg. HW.100.SLR.0.25 had it's first fill with the delta front at **100** units) which increase in steps of 50 units. An experiment with a constant fill and no delta is shown for comparison (Constant\_0.25).

This pdf document provides uninterpreted sections at the end of the five intervals of sedimentation for each experiment.

Experiment: FW.100.SLR.0.25

Time:15 Interval: 1 SLR: 0.25 ●

Time:30 Interval: 2 SLR: 0.25 ●

Time:45 Interval: 3 SLR: 0.25 ●

Time:60 Interval: 4 SLR: 0.25 ●

Time:75 Interval: 5 SLR: 0.25 ●

Experiment: FW.150.SLR.0.25

Time:15 Interval: 1 SLR: 0.25

Time:30 Interval: 2 SLR: 0.25

Time:45 Interval: 3 SLR: 0.25

Time:60 Interval: 4 SLR: 0.25

Time:75 Interval: 5 SLR: 0.25

Experiment: FW.200.SLR.0.25

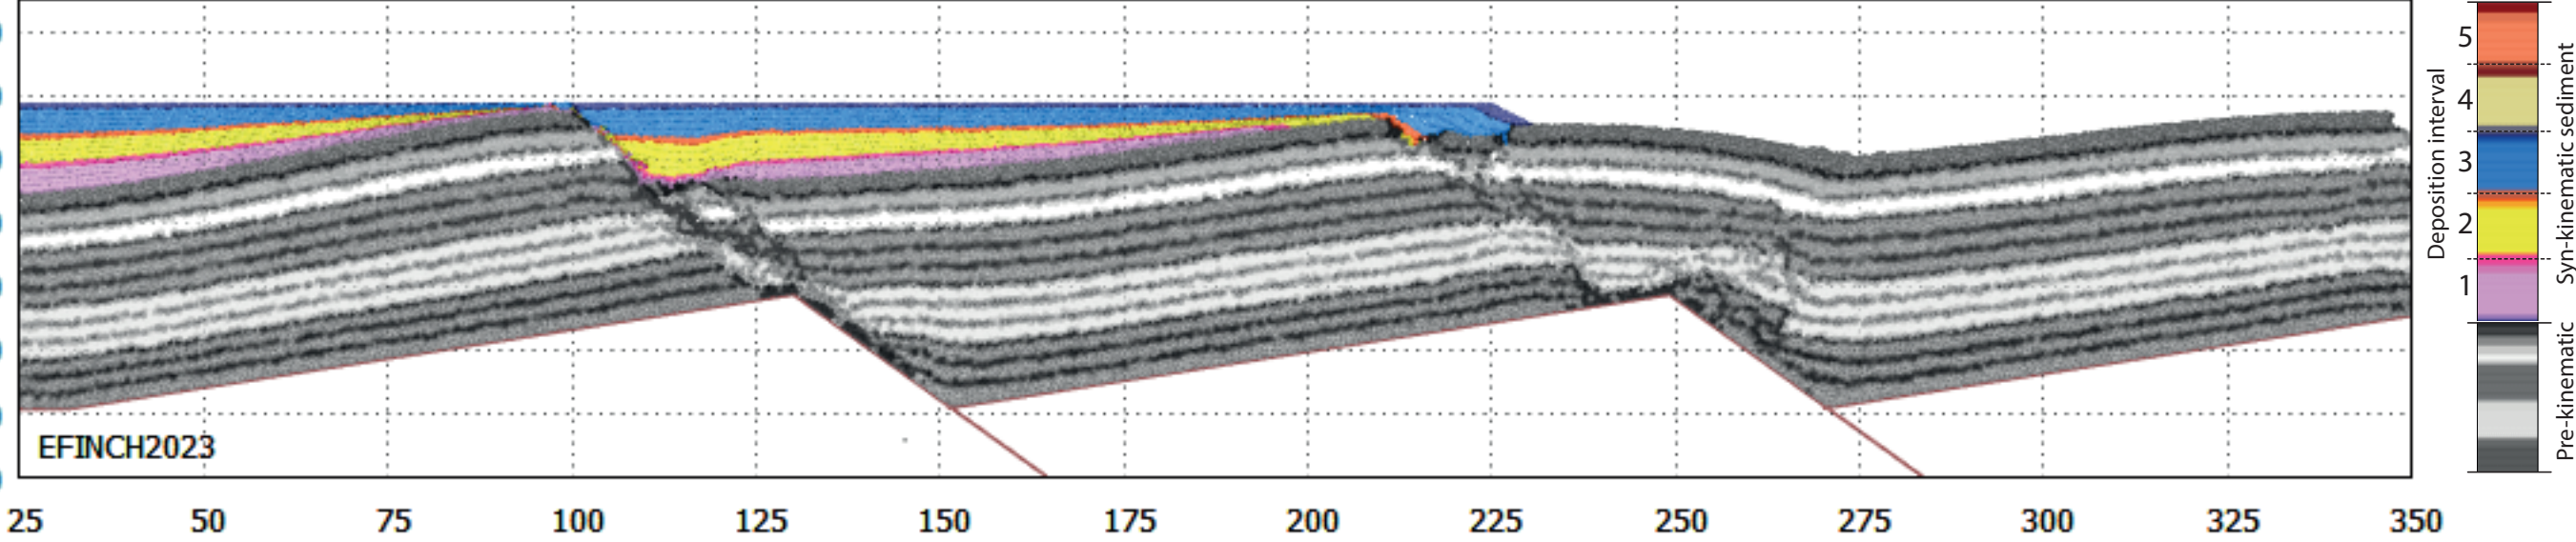

Time:15 Interval: 1 SLR: 0.25

Time:30 Interval: 2 SLR: 0.25

Time:45 Interval: 3 SLR: 0.25

Time:60 Interval: 4 SLR: 0.25

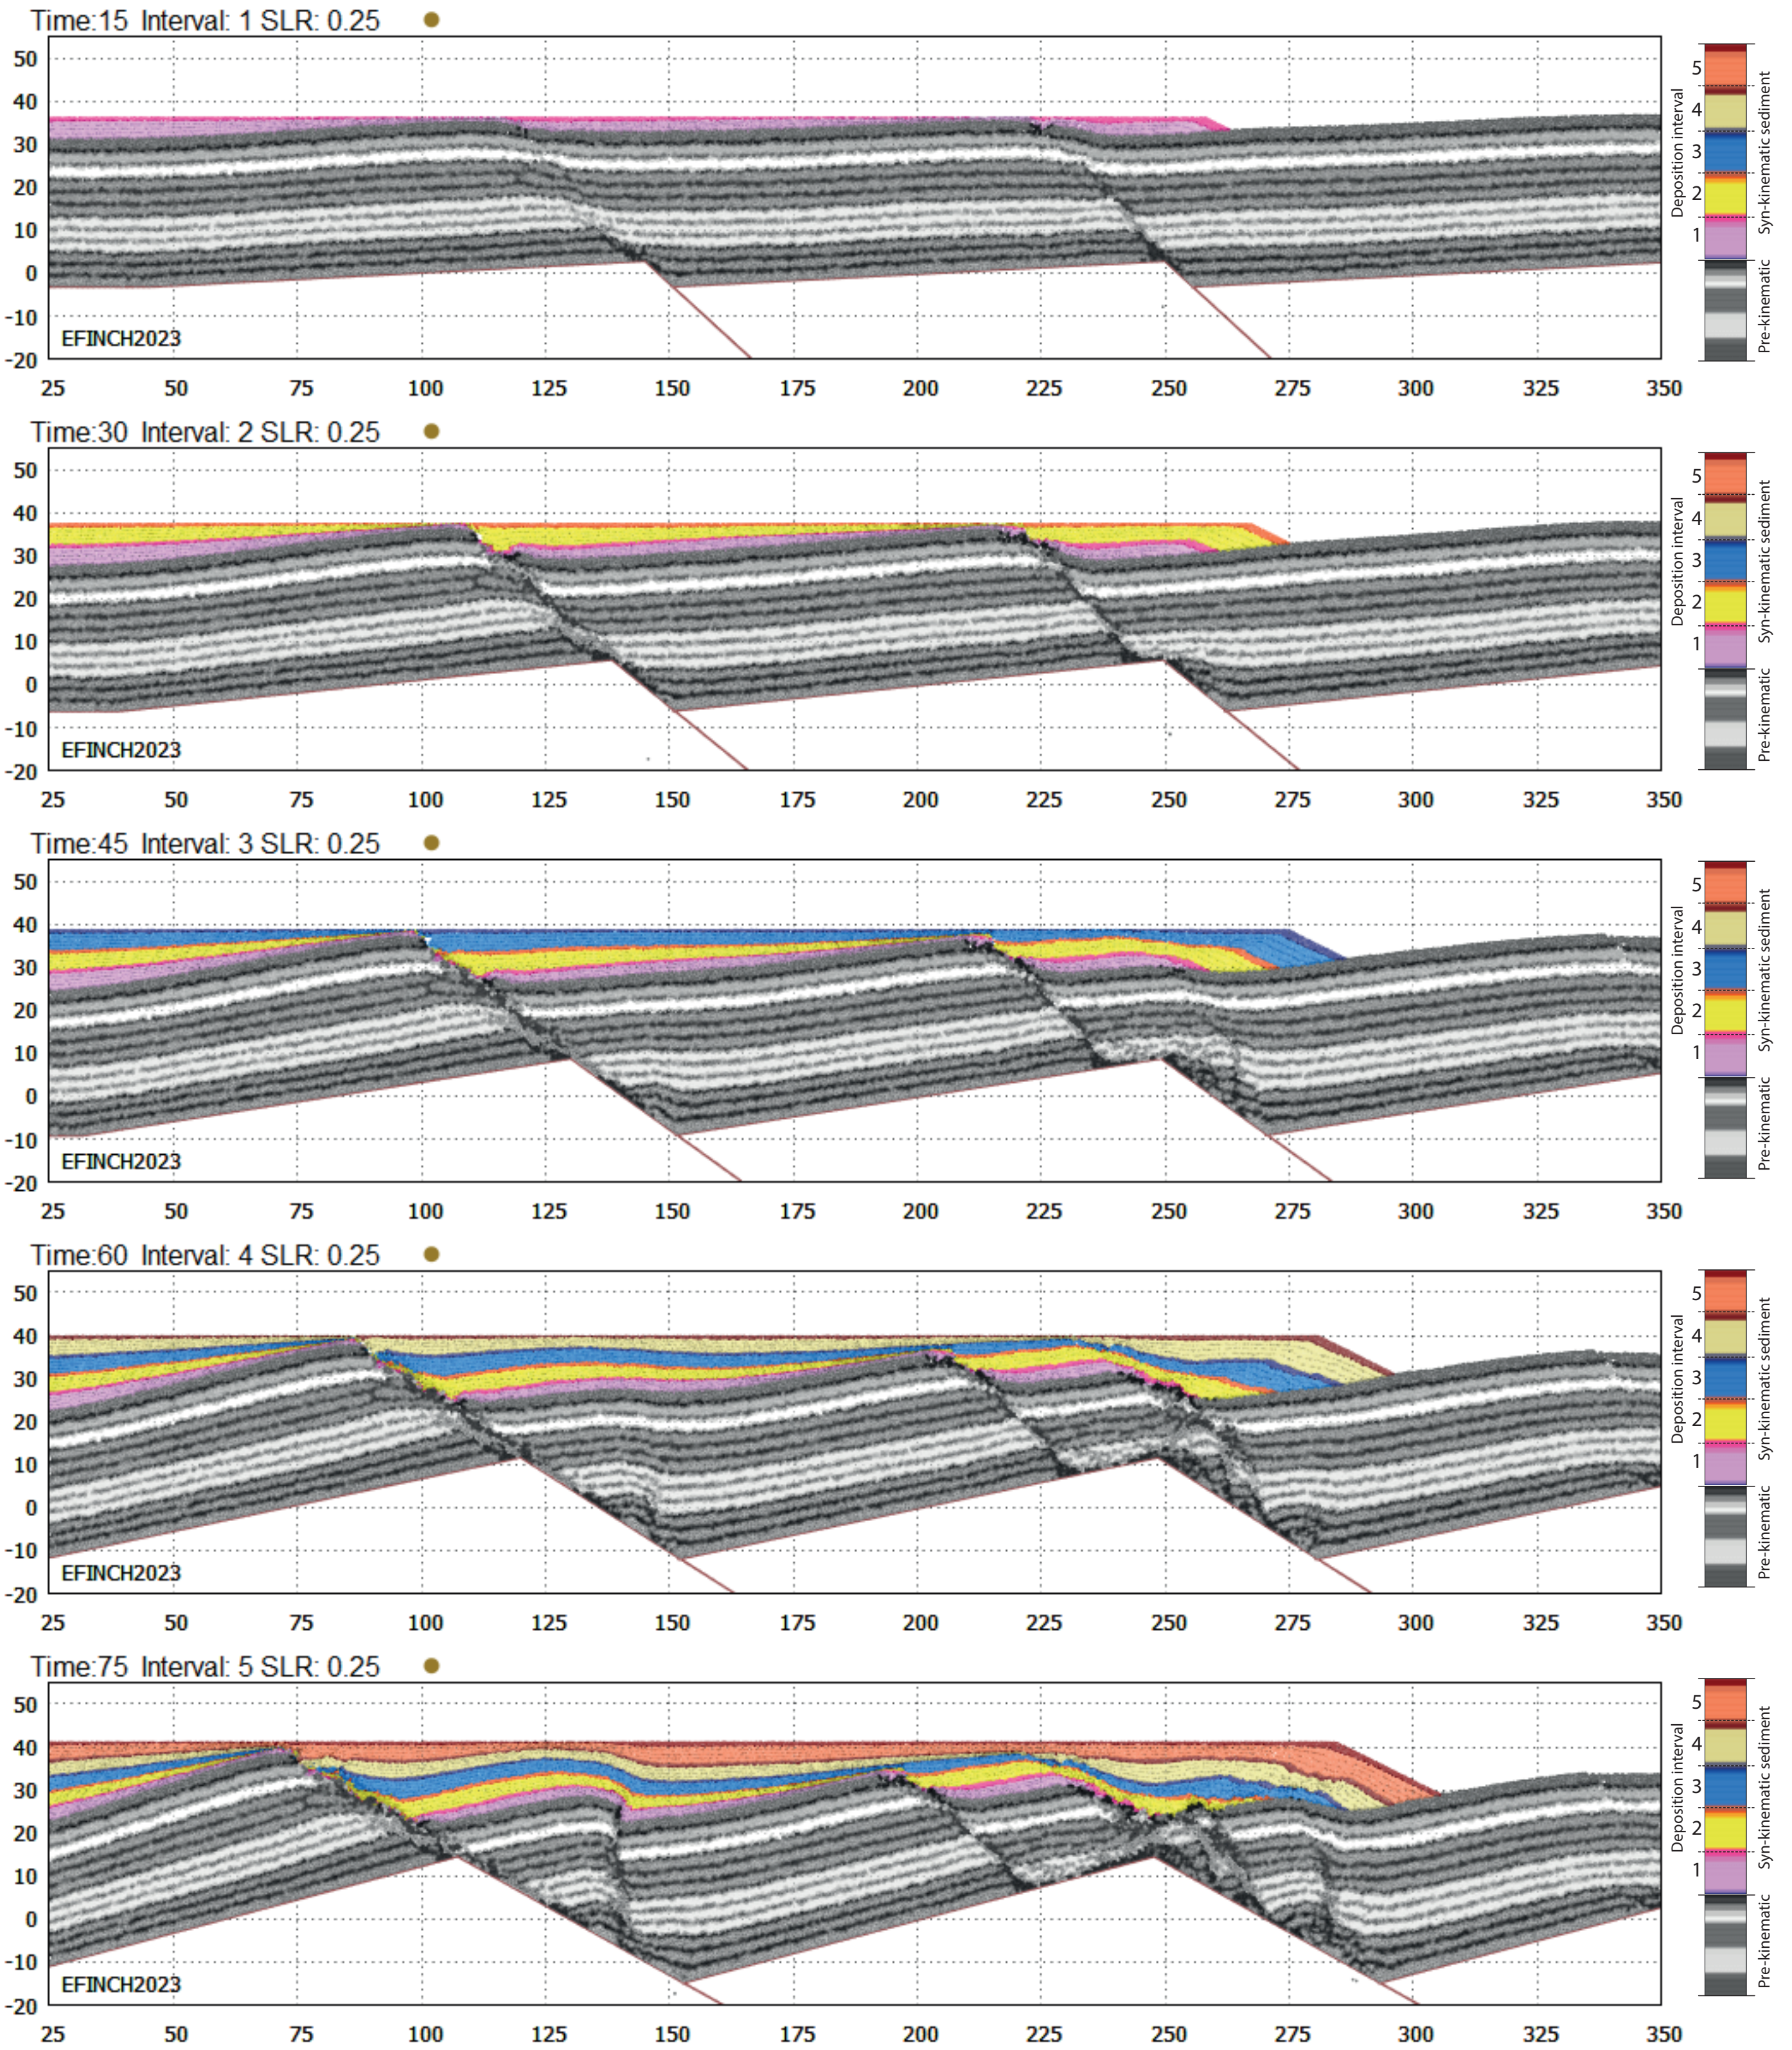

Time:75 Interval: 5 SLR: 0.25

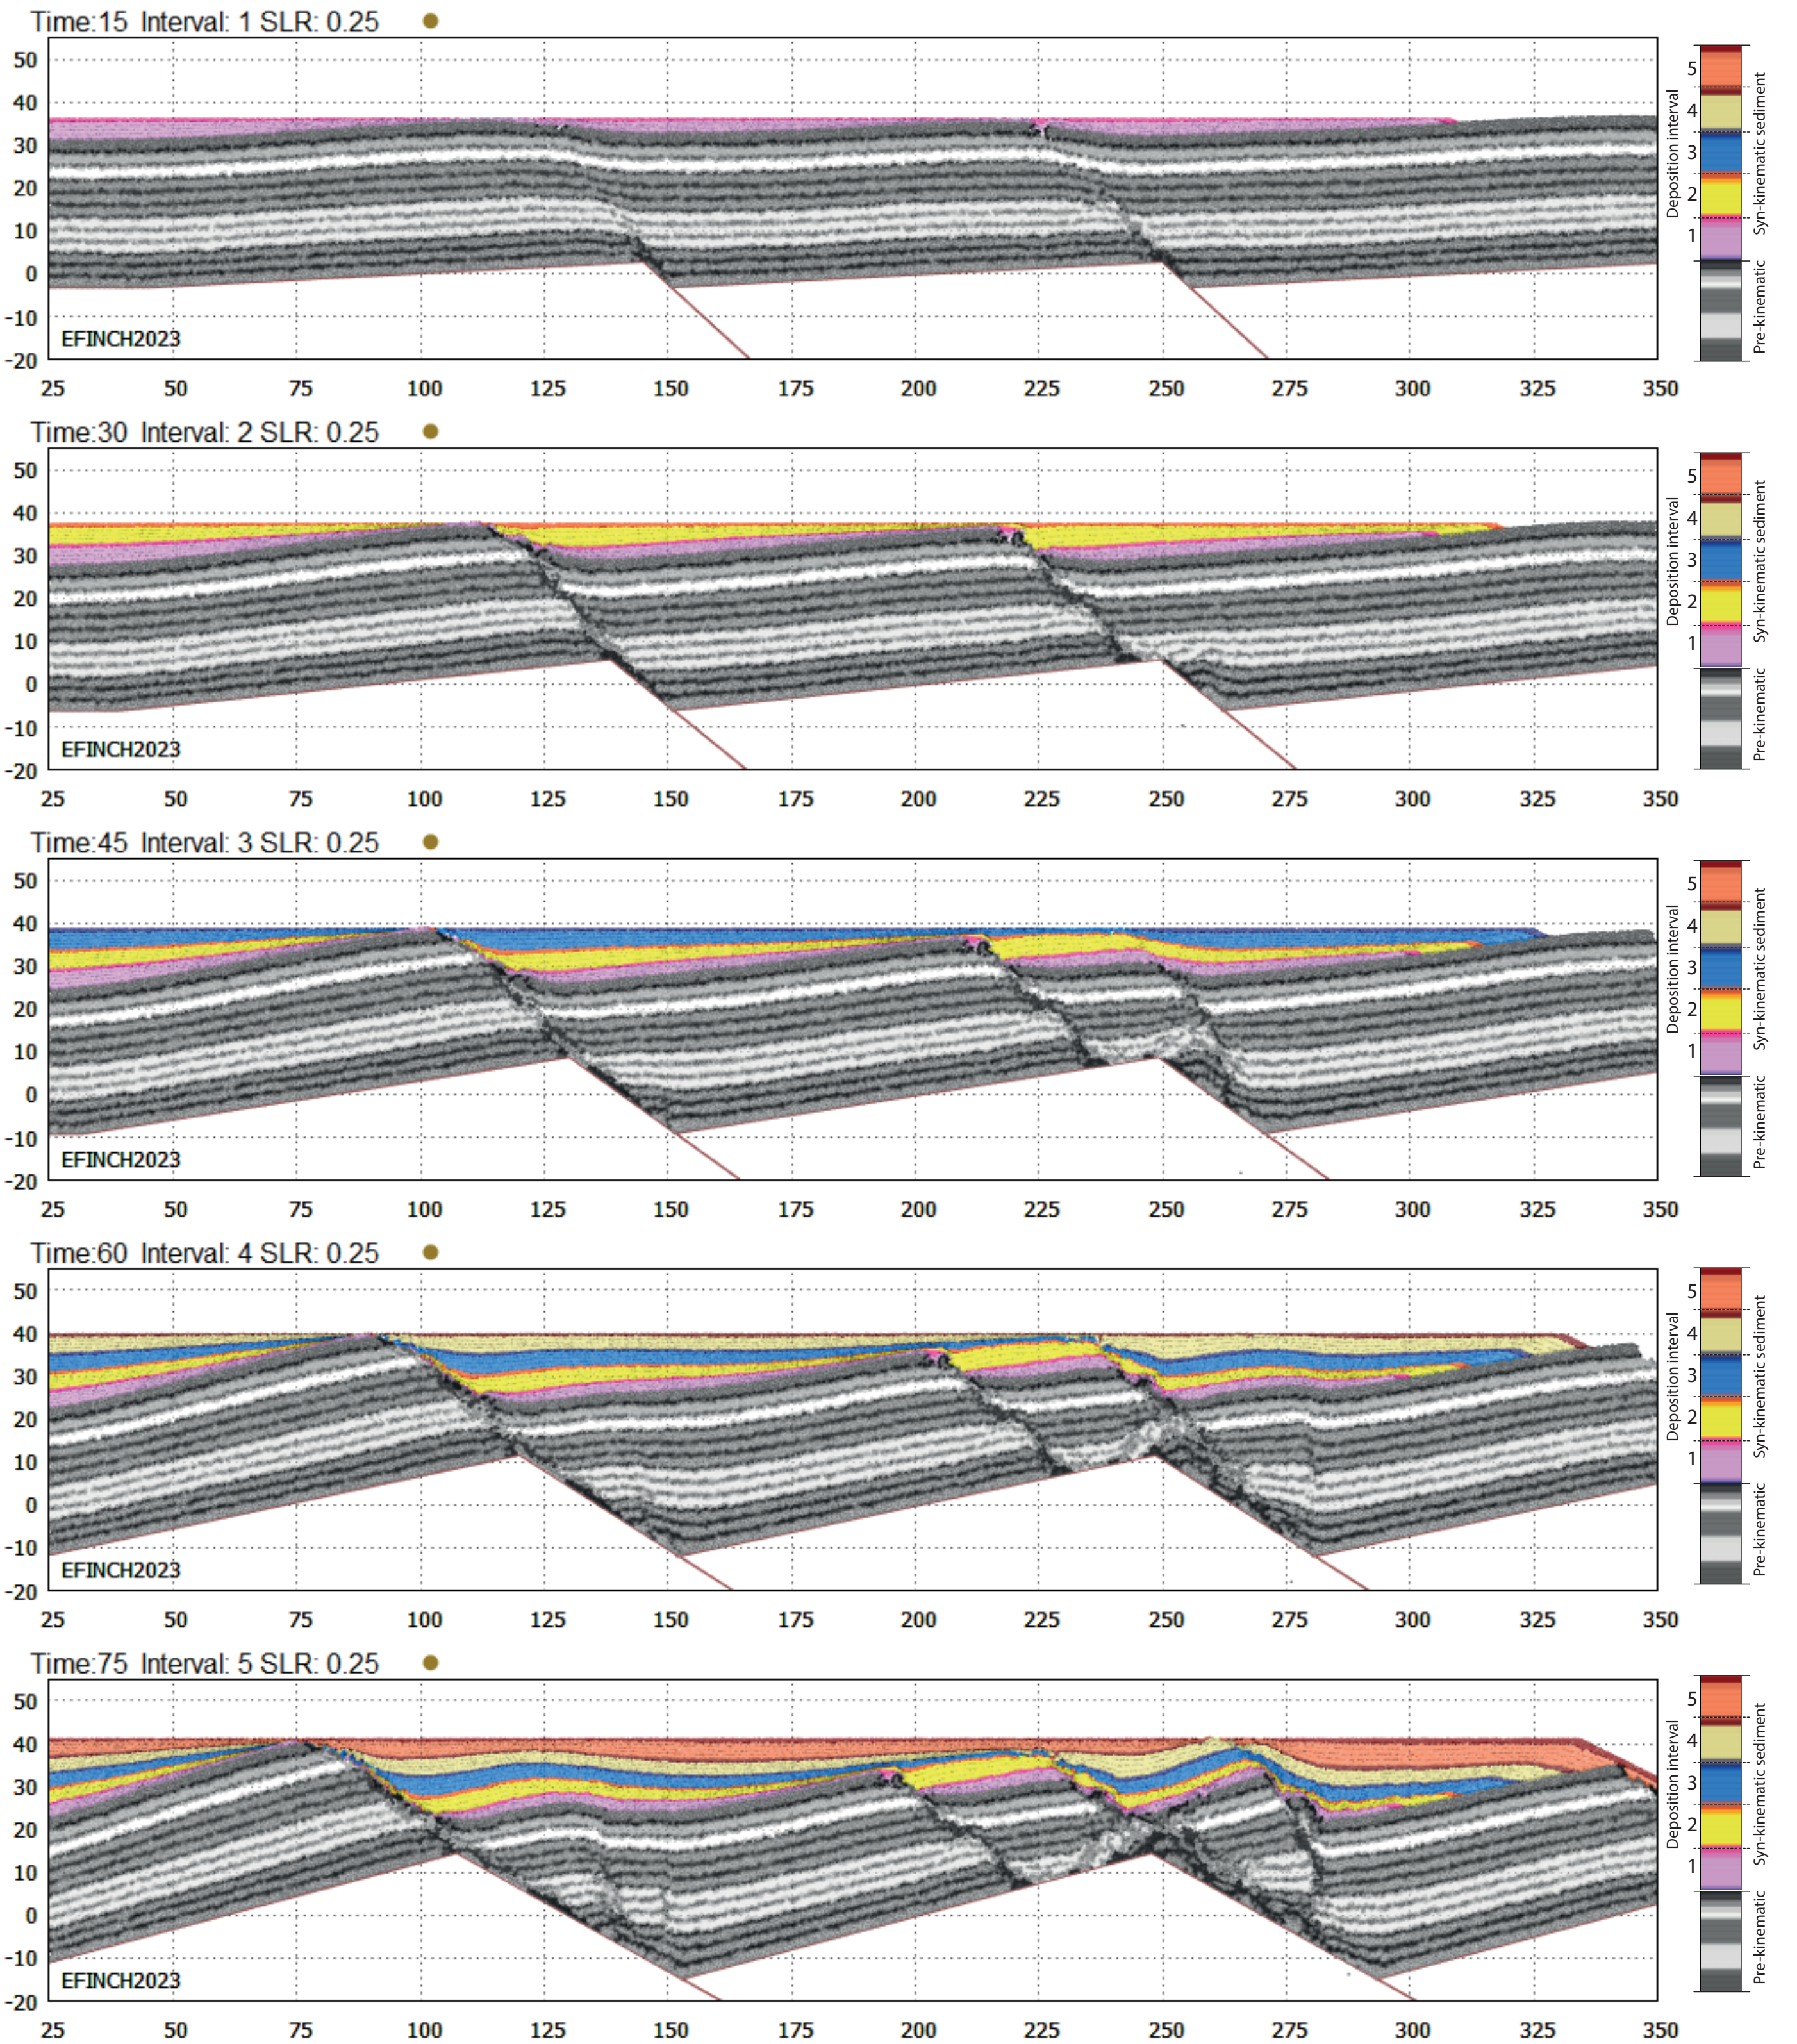

Experiment: FW.250.SLR.0.25

Experiment: FW.300.SLR.0.25

Experiment: constant\_0.25
